## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3-18, 22-27, 29 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burk et al. (US 6,531,504) in view of JP Patent 63002972.

Burk et al. teach the use of a prostaglandin compounds with all the claimed substitutions, except having hydrogen instead of linear alkyl at the R2 and R3 position. The Japanese Patent teaches the use linear alkyl at R2 and R3 position for the prostaglandins is old and well known. It would have been obvious for a person skilled in the art to add alkyl instead of hydrogen at the R2 and R3 position motivated by the teachings of the Japanese patent, which teaches the addition of such groups at the R2 and R3 position as old and well known.

Applicant's arguments and remarks have been carefully considered, but are not deemed to be persuasive in view of the newly relied upon reference.
